

# Neles™ Neldisc™ high performance butterfly valves

## Series L6, LW & LG Model D

Neles Neldisc is a metal seated triple eccentric high performance butterfly valve that provides long lasting tight shut-off with excellent flow characteristics and high capacity. The L-Series are widely used in pulp & paper, chemical, petrochemical and refining industries.

With nearly equal percentage characteristics and superior tightness, Neldisc triple eccentric butterfly valves operate both in control and tight shutoff applications. As a result of the unique triple offset geometry of Neldisc, the contact between disc and seat is mechanically induced and does not rely on assistance from differential pressure. This design also provides extended operational life in control, high cycle, high temperature and abrasive applications.

Due to a number of special constructions, developed from the versatile Neldisc design, these valves offer a powerful tool for standardization and are truly high performance valves.

The Neldisc high-performance butterfly valve is available in double flange, wafer and lug body types with a range of materials and seat combinations suitable for service in a wide variety of applications including NACE MR0103 & MR0175.

### Offering

The following designs are available in sizes 3"-12" (DN 80-300);

	LW	LG	L6
Body type	Wafer	Lugged	Double flanged
Design	API 609 ASME B16.34 EN 593	API 609 ASME B16.34 EN 593	API 609 ASME B16.34 EN 593
Pressure class	API 609 Cat B Class 150 & 300	API 609 Cat B Class 150 & 300	API 609 Cat B Class 150 & 300
Face to face	API 609 category B, lug and wafer type EN 558 - part 1, table 5, basic series 16, 20 & 25	API 609 category B, lug and wafer type EN 558 - part 1, table 5, basic series 16, 20 & 25	API 609 category B valves Double-flanged (short pattern) EN 558 - part 1, table 5, basic series 13
Flange connection/ Drilling	ASME B16.5 EN 1092-1	ASME B16.5 EN 1092-1	ASME B16.5 EN 1092-1

### Features

#### Modularity

- Interchangeable modules ensure faster deliveries for a wide range of applications & minimizes parts required to stock on site
- Through shaft and drive shaft with trunnion options available
- Live-loaded packing as standard to minimize the product loss and emission.
- Same inside parts regardless of body design results in same flow characteristics and high Cv

#### Performance

- Cost effective control valve for moderate differential pressures.
- Contact between disc and seat is mechanically induced and does not rely on assistance from differential pressure.
- Heavy-duty stem and bearings arrangement extend service life and are insensitive to thermal cycles and impurities.
- Easier to withstand process fluctuations and harsh conditions for example flow vibration and temperature/ pressure changes.

- Easy seat maintenance: Interchangeable seat can be replaced without disassembling the disc and shaft.
- Seat replacement does not require any adjustment or special tools.
- Lugged and double flange style valves are suitable for bidirectional dead-end service at the full pressure temperature rating as standard.
- Lifting holes for valves weighting over 20 kg
- PTFE V-ring or graphite packing for a wide range of applications.

### Field-proven single-piece flexible seat design

- Unique all-metal seat design assures superior tightness in difficult applications over long time periods
- Bi-directional long last tightness is maintained even in high cycle rate services.
- Low friction and excellent wear resistance.
- Longer service life with less maintenance
- Sealing element protected in the seat pocket for lowest wear & tear
- No secondary components required to maintain tightness
- No resilient parts exposed to the medium
- Solid metal seat design offers lowered operational torque which reduces actuator size

### Offset shaft and eccentric disc

- No seat/disc contact in the open or intermediate position
- Eliminates wear points at top and bottom of seats for high cycle life
- Reduced torque requirements, allowing for smaller actuators

### Approvals/Reliability/Safety

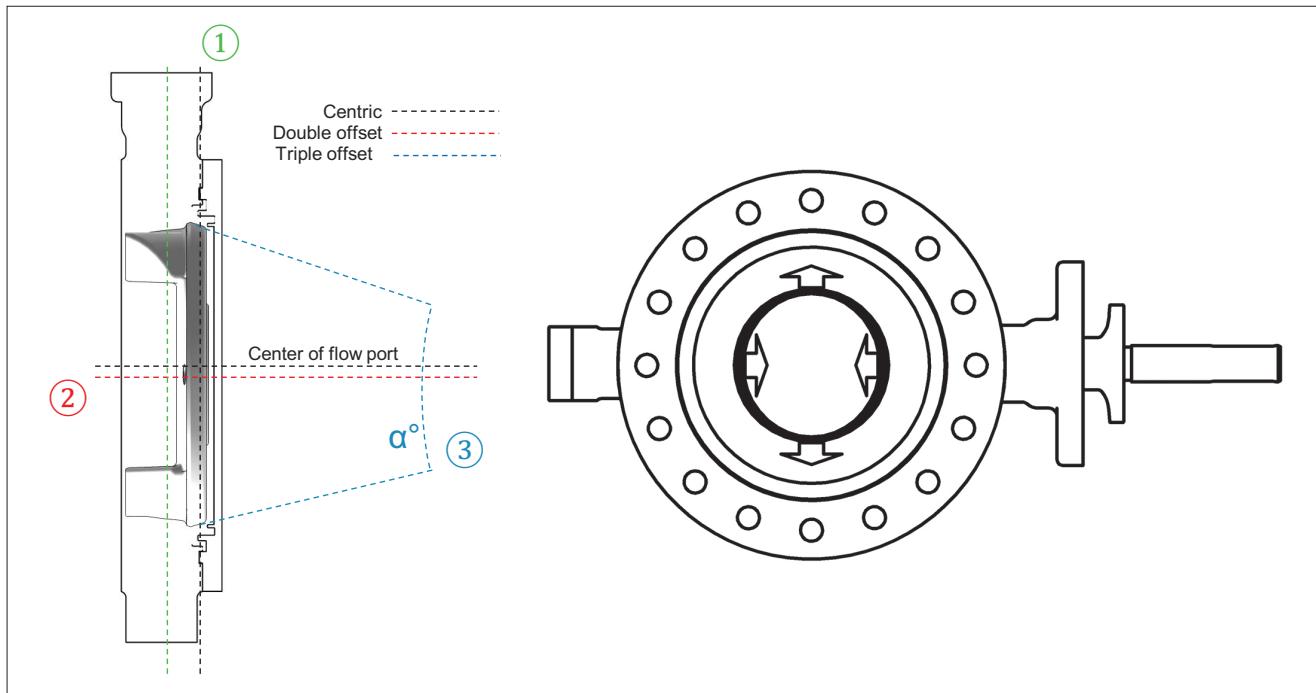

- ISO 15848-1 emission certification
- API 607 fire safe certification
- Anti-blow out design (Positive Shaft Retention). Valves are equipped with retainer plates on top of the gland to prevent movement of the top portion of the shaft past the gland if for any reason the shaft should break within the valve.

### Excellent for both on-off and control applications

- Superior control characteristics
- Inherent flow characteristic is modified equal percentage.
- Wide rangeability
- Tight shut-off even in control applications
- Good controllability via smoothly rising installed characteristic curve at both very small openings and nearly full Cv positions. L-series provides very wide rangeability in fairly low pressure drop services.
- Good dynamic stability in both flow directions.

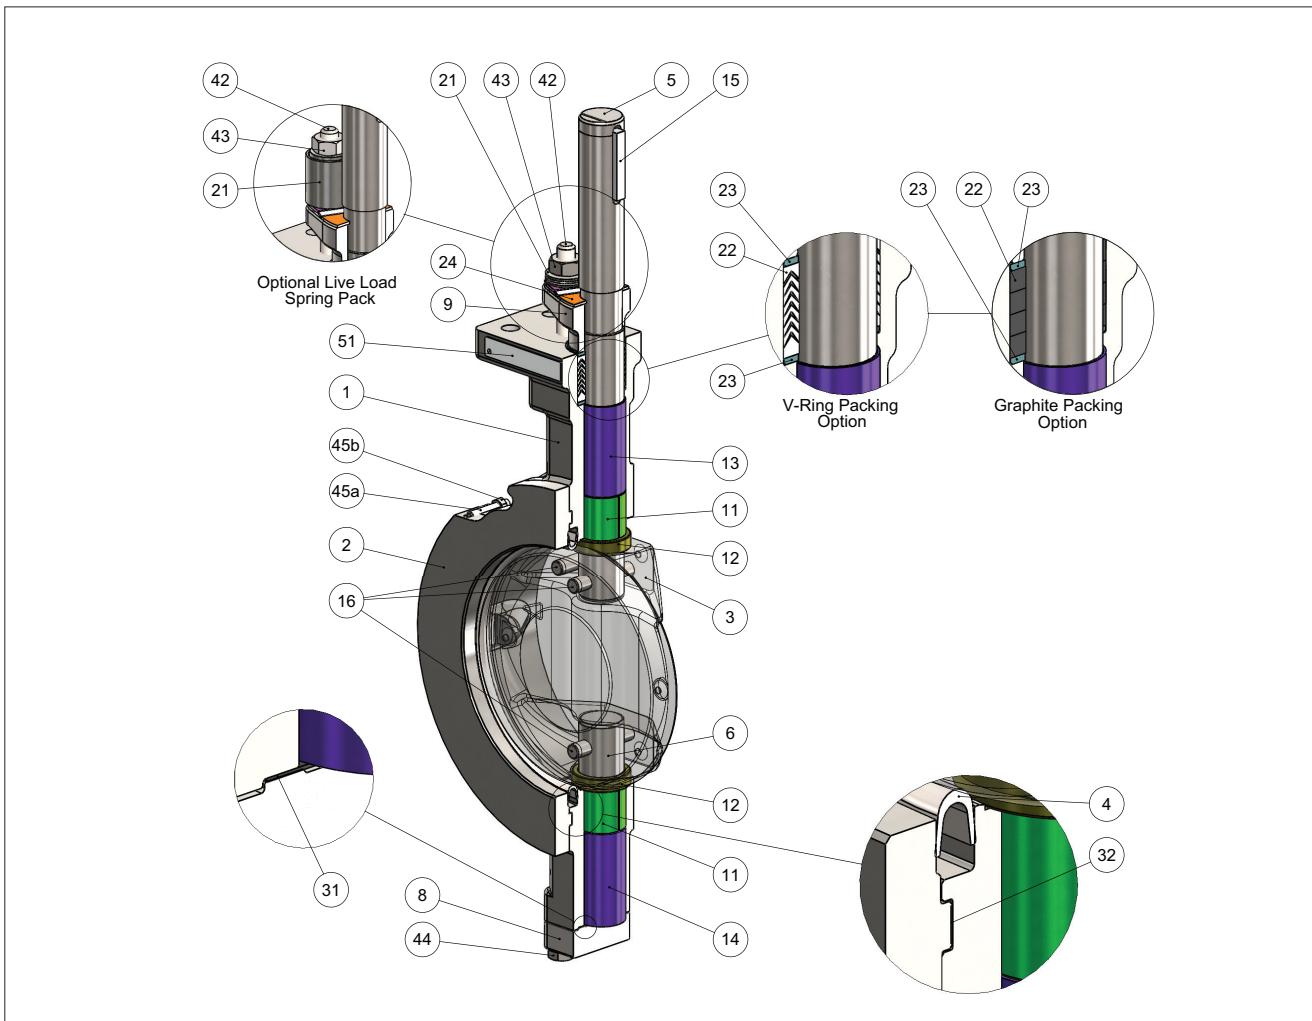

## Neldisc triple eccentric sealing design

Neldisc high performance butterfly valves rely on triple eccentric sealing design. This unique design enables utilization of performance features from both positions seated and torque seated sealing principles resulting in high tightness level together with low wear. The disc of the valve is machined to close tolerances, to create an elliptical shape, similar to an oblique slice taken from a solid metal cone. When the valve is closed, the elliptical disc at the major axis displaces the seat ring outward, causing the seat ring to contact the disc at the minor axis. The seat ring is able to move freely in a plane in its recess, to accommodate the disc in an optimal manner. When the valve is opened, the contact is released, and the seat ring returns to its original circular shape. With slight changes to the machining of the disc the field proven Neldisc sealing principle is now optimized to reach even the toughest tightness standards.

Triple eccentric sealing design. 1) First eccentricity, 2) Double offset, and 3) Triple offset

## Valve construction

## Technical specifications

### Product type

- L6: Double flange body design
- LW: Wafer type body design
- LG: Lug type body design

### Size range

- NPS 3"-12"
- DN 80-300

### Pressure classes

- ASME 150 & ASME 300
- PN 10-40

### Temperature range

- -200 ... +600 °C (-328 ... +1112 °F)

### Design standard

In accordance with ASME B16.34, API 609 cat B, EN 593

### Standard materials

Body:	EN 10213-1.0619 / ASTM A 216 gr. WCB
Disc:	EN 10088-1.4401 / ASTM A 182 gr. F316
Clamp ring:	EN 10213-1.4408 / ASTM A 351 gr. CF8M
Shafts and pins:	AISI 316 / ASTM A 546 gr. 630 (17-4PH)
Seat ring, code A:	Hard chrome plated Incoloy 825
Bearings:	AISI 316 + PTFE or INC625 + carbon-based coating or cobalt based alloy

### Material and test certifications

EN 10204-3.1B material certificates for body, clamp ring, gland and blind flange. Disc and shaft certification on request. Tightness test certificate.

### Approvals

- API 607 fire safe
- ISO 15848-1 fugitive emission
- TSG
- TR-CU
- SIL

### Tightness (Bi-directional)

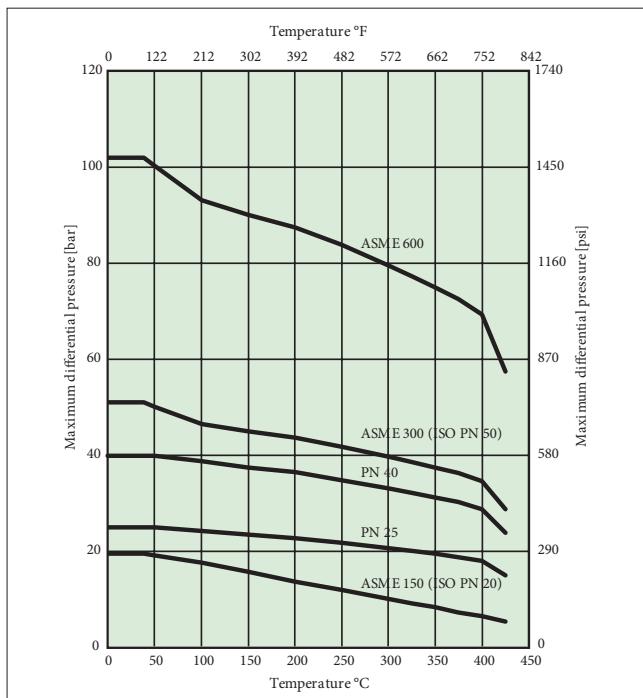

- Standard tightness
  - ISO 5208, rate D, air
  - ANSI/FCI 70-2 Class V, air
  - 10 x ISO 5208 rate D with RH hand lever
- Optional tightness:
  - API 598 (metal seated),
  - ANSI/FCI 70-2 Class VI
  - ISO 5208 rate A

Optional leakage tests can be conducted per request.

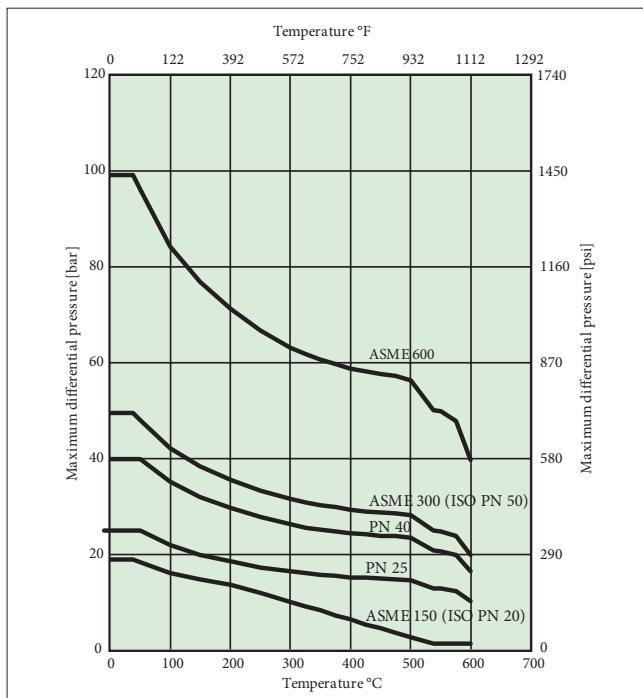

### Options

- Neles™ Q-disc™ flow balancing trim, see bulletin 8QD20EN
- Oxygen construction for gaseous oxygen service
- High temperature design
- Extended service design
- Bearing protection design
- Graphite free design
- Cryogenic construction with extended bonnet and drive shaft
- L series valves are available to comply with NACE MR0103 or NACE MR0175

### Pressure/temperature ratings for valve body, WCB

### Pressure/temperature ratings for valve body, CF8M

## Flow data

The tables below provide flow coefficients for L-Series butterfly valves covered in this bulletin. The Cv values represent the number of gallons per minute of +60°F water that flows through a fully open valve at a pressure drop of 1 psi.

The metric equivalent Kv is the flow of water at 16°C through the valve in cubic meters per hour at a pressure drop of 1kg/cm<sup>2</sup>. To convert Cv to Kv multiply by 0.8569.

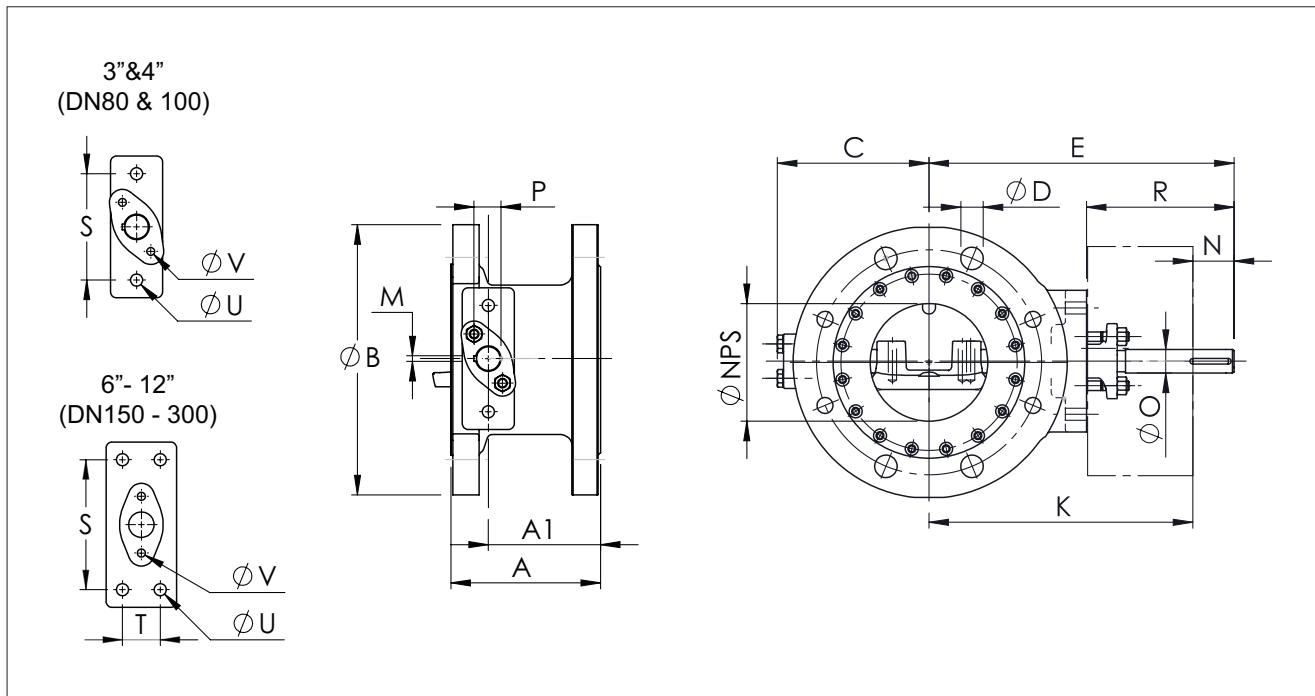

Inch	DN	Design style	Cv		Inch	DN	Design style	Cv	
			ASME 150	ASME 300				ASME 150	ASME 300
3	80	Through shaft	220	220	3	80	Drive shaft + trunnion	247	247
